

Hero System Monsters

Point Values and Page References

Listed here in alphabetical order are all the monsters, creatures and machines from the *Hero System Bestiary* (HSB) and *Mosters, Minions & Marauders* (MMM).

Each numbered monster name is followed by a nominal point value (taken from the *Total Cost* entry in their description) and a page reference — HSB or MMM, as above.

Note that pure point value is **not** necessarily a good guide to whether or not a given monster will provide a reasonable and enjoyable challenge to a party of adventurers: for example, a Barracuda is worth 44pts. It will provide no challenge whatsoever to a group of adventurers in a boat (who probably wouldn't even notice it), but may be lethal to even an experienced adventurer in its own element. Consider the actual capabilities of the monster *and* the PCs before sending your hapless party to their grisly gory doom.

The individual monsters are numbered to facilitate random selection, if the GM so desires.
